Use Case	Creating a New Account
Iteration	1
Primary Actor	Player
Goal in Context	The player wants to create a new account with an email, username and password which would allow them to play available games.
Preconditions	<ul> <li>The system is online and operational.</li> <li>The login interface is accessible.</li> <li>The player has a valid email address.</li> </ul>
Trigger	The player clicks the "Create A New Account" button on the login interface.
Scenario	<ol> <li>The player navigates to the login interface of the multiplayer game platform.</li> <li>The player selects "Create A New Account".</li> <li>The player enters a valid email address, chooses a unique username and a strong password.</li> <li>The system validates the format of the email address.</li> <li>The system validates if the username is available.</li> <li>The system validates if the password meets security requirements, if there are any in place.</li> <li>If any of the input is invalid, the player is prompted to re-enter a valid one.</li> <li>After entering all valid inputs, the system sends a verification code to the email address provided.</li> <li>The system prompts the player to check their email address and is taken to the next interface to enter the verification code.</li> </ol>
Postconditions	<ul> <li>A verification code is sent to the email address provided.</li> <li>The player is taken to a new interface where they can enter the verification code.</li> </ul>
Exceptions	<ul> <li>The system displays an error message if the player enters a wrong email format, or a username that has already been taken by an existing user, or a weak password, and is prompted to re-enter the details.</li> <li>The email address does not exist.</li> </ul>
Priority	Highest

When Available	Initial System Launch
Channel to Actor	GUI - Login Interface
Secondary Actors	Email service provider
Channel to Secondary Actors	Email API
Open Issues	<ul> <li>Should there be any password requirements?</li> <li>If the user enters an existing username, should the system suggest a similar yet unique username?</li> </ul>

Use Case	Enter Verification Code to Register the Account
Iteration	1
Primary Actor	Player
Goal in Context	The player wants to enter the verification code sent to their email to verify it to the system and activate their account.
Preconditions	<ul> <li>The player is in process of registering a new account</li> <li>A verification code has been sent to the email address provided</li> </ul>
Trigger	The player has clicked "Register" after entering valid email, username and password in the process of creating a new account.
Scenario	<ol> <li>The system has sent a verification code to the email address provided.</li> <li>The player is taken to the verification interface.</li> <li>The player checks their email and enters the verification code in the verification page.</li> <li>The system checks if the code is valid and unexpired.</li> <li>If valid, the system successfully registers the player's account with the email address, and username and password chosen before, in the database.</li> <li>The player is redirected to the login page.</li> </ol>
Postconditions	<ul> <li>The account has been activated and registered in the database.</li> <li>The user can login with the email/username and password.</li> </ul>
Exceptions	- The system prompts an error message if the verification code is

	incorrect The code entered is expired.
Priority	Highest
When Available	Always after registration
Channel to Actor	GUI - Verification interface extending the registration and login interface
Secondary Actors	Database
Channel to Secondary Actors	Database API
Open Issues	<ul> <li>Should the player be allowed to re-enter the verification code if they enter an incorrect one?</li> <li>Should players be allowed to request a new code or do they have to go through registration again?</li> <li>What is the expiration time limit for the code?</li> </ul>
